

Cheese!!

REQUIRED:

DMJ-0004G Melting urn or
DMB-00001 Mini bain 1000

Mould mix
DGW-00005 or

Plusmix
WAX-00110

KLP- 06383 or
KLP-24383 Colour tablets maize
yellow

KPT-03x08 Flat wick 3 x 8

MAL-00141 Square cast

MAL-00233 Narrow square or any
other narrow cast
according to preference

MAL-00401 Silicon plug

MAL-00300 Centring needle

WAS-63213 or
WAS-63226 Reddish-brown or silver
decorative wax sheets
Tray for making small ice
blocks

*Use your
imagination!*

*If you're curious about
making other candles,
please sign up to one of our
workshops*

- Make small ice blocks (max. 10 x 10 mm) and chop these even smaller to create unevenly-sized bits of ice. Keep these in the freezer.
- Heat the wax to 90 °C and mould a yellow narrow square candle according to the manual (www.gildewerk.com > service center > producttips). Leave about 10 cm of wick at the top and the bottom of the candle. A dinner candle is also ideal for this purpose.
- Place the candle in the square cast and seal the base with the silicone plug. Fill or partly fill the space between the candle and the sides of the cast with bits of ice. Immediately pour yellow wax over this to the rim of the cast. Once the wax has cooled completely, remove it from the cast. Do this above a sink, because the ice would have melted in the meantime. Make sure that you drain all the water from the candle. You will now have a candle with holes in in. You can use the decorative wax sheets to make small mice that appear to crawl out of the holes.
- As it burns, the light will shine beautifully from the holes.
- You can – of course – use different colours or no colour at all, or create different shapes, e.g. round.
