

Product tips

wax4oil

Pour the desired amount of oil into a heat-resistant glass.

Allow used oil to rest for 24 hours so that food residue and water sink to the bottom. Purify the oil by filtering it through a fine sieve (e.g. lace or discarded pantyhose). Do not use the residue!

Measure out the appropriate amount of wax4oil (20 g per 100 ml).

Mix approximately 1/3 of the powder into the oil.

Heat the mixture in a microwave (900 W, 1 - 2 min per 100 ml).

Remove the glass from the microwave and add the rest of the powder (please note: glass will be hot).

Mix until dissolved.

Now add perfume oil if desired (app 5 ml per 100ml).

Pour into a suitable glass or pot and insert an appropriate wick with wick foot.

Leave to cool.
